04 How to Set Up a Prospecting Database

05 How to Sell, Build Presentations, and Collect Payments

06 How to Onboard New Customers

07 AI Business Execution Playbook

08 What To Do Next - From Learning to Earning

Introduction: Why AI Skills Matter Now

The world is changing fast. Technology is moving quicker than ever, and artificial intelligence (AI) is right at the center of it. For young Nigerians facing unemployment, unstable income, and limited access to traditional opportunities, AI offers a gateway to digital income, global relevance, and financial independence.

This eBook is your step-by-step guide to 7 practical AI skills you can start learning and applying today – even with just your smartphone. These skills are not just theoretical. They are tools to help you make money, grow your business, or start a freelance career. Let's get started.

1. The AI Mindset

In today's digital economy, success begins with how you think. The AI mindset is not about becoming a programmer. It's about seeing AI as a partner and tool that helps you create, solve problems, and deliver value at speed.

What It Means

The AI mindset is about thinking like a digital entrepreneur. It's the habit of asking, "How can I use AI to do this faster, cheaper, and better?"

Why It Matters

- This mindset helps you stay ahead. It keeps you relevant even as jobs and skills change.
- It helps you think in terms of systems, automation, and solutions — the foundation of digital income.

Tools to Explore

- **ChatGPT** for conversations and idea generation
- **Notion AI** for productivity
- **Google Gemini** for mobile-friendly AI support
- **YouTube** for skill tutorials

How To Build This Mindset

- Replace consumption with creation. Don't just scroll — build.
- Ask AI for help daily: ideas, answers, outlines, or content.
- Be a problem-solver, not a passive user.

Mastering the AI mindset sets the tone for all other skills. It gives you the confidence to take on big challenges with smart tools. This is your foundation.

2. How to Generate Content That Sells

Every business needs content: captions, emails, flyers, blogs, video scripts. If you can create persuasive content using AI, you'll always be in demand.

What It Means

- Content that sells gets people to take action — buy, click, sign up, or message you.
- It's the bridge between a product and a buyer's emotions

Why It Matters

- Content is used everywhere: Instagram, WhatsApp, websites, even product labels.
- If you can generate quality content fast, you'll stand out

Tools to Explore

- **ChatGPT** for content ideas and writing
- **Copy.ai** or **Jasper** for sales-focused writing
- **Canva** for designing visuals

Step-by-Step

1. Use prompts like: "Write a catchy product description for a unisex perfume."
2. Ask ChatGPT to generate multiple variations
3. Use Canva to create matching visuals

Monetization

- Offer Instagram content packages to vendors
- Start a blog or YouTube scriptwriting service
- Sell ad captions to small business owners

With this skill, you can turn words into money. Whether you write for yourself or clients, content that sells is the engine of online business.

3. How to Do Email Follow-Up

Email is not dead. In fact, it's one of the most effective tools for closing sales and building long-term customer relationships.

What It Means

- Email follow-up is a system of sending helpful, persuasive emails to a potential customer after the first contact.

Why It Matters

- Most sales happen after multiple contacts, not the first one.
- Automated follow-up makes you look professional and increases trust.

Tools to Explore

- **Flowrite** or **ChatGPT** for writing
- **Mailchimp** or **Brevo** for sending and automation

Step-by-Step

1. Use AI to create a 3-part email sequence: Welcome, Value, Offer
2. Set up a free Mailchimp account
3. Schedule the emails to go out over 3-5 days

Monetization

- Manage email follow-up for coaches, vendors, event planners
- Create email templates to sell as a digital product

Email follow-up turns leads into loyal customers. And with AI, you don't need to be a copywriter to do it well.

4. How to Set Up a Prospecting Database

Every successful business has a list of people who might buy. AI helps you organize and maintain that list so you can follow up and sell.

What It Means

- A prospecting database is a digital list of leads, potential clients, or interested buyers, sorted by interest or buying behavior.

Why It Matters

- Without prospects, you're guessing. With data, you're planning.
- Keeping track of leads helps you know who to reach, when, and how.

Tools to Explore

- **Google Sheets** or **Notion**
- **ChatGPT** for data organization and formatting
- **PhantomBuster** or **Manual Search** for lead collection

Step-by-Step

1. Define your audience (e.g., fashion vendors in Abuja)
2. Create spreadsheet columns: Name, IG Handle, Phone, Product Interest, Follow-up Date
3. Collect manually or use lead scraping tools

Monetization

- Build and sell lead lists
- Offer prospecting services to SMEs and consultants

This skill turns you into a growth asset for any business. A good list is the beginning of good money.

5. How to Sell, Build Presentations, and Collect Payments

You have the product, but how do you convince someone to buy? And how do you collect money securely? AI tools help you package your value like a pro.

What It Means

- Presentations are visual sales tools. Payment systems let you get paid online, fast.

Why It Matters

- Good selling isn't about hard pressure — it's about clarity and confidence.
- With AI, you can build beautiful slides, pricing tables, and payment buttons without a designer.

Tools to Explore

- **Canva** or **Gamma.app** for slides
- **ChatGPT** to script your pitch
- **Paystack** or **Flutterwave** for payments

Step-by-Step

1. Ask ChatGPT: "Create a pitch for my skincare kit for teens."
2. Build slides using Canva templates
3. Insert a Paystack payment link

Monetization

- Sell your own products or services
- Offer to build sales decks for others

If you can present and collect payment, you can do business anywhere. AI gives you the power to sell like a pro.

6. How to Onboard New Customers

The sale isn't the end — it's the beginning of a relationship. Onboarding helps you keep customers happy and engaged.

What It Means

- Onboarding is the process of welcoming new clients, answering their questions, and helping them get value fast.

Why It Matters

- Proper onboarding increases repeat sales, reduces complaints, and boosts referrals.

Tools to Explore

- **WhatsApp Business** auto-replies
- **Notion** for creating customer guides
- **Google Forms** for surveys or instructions

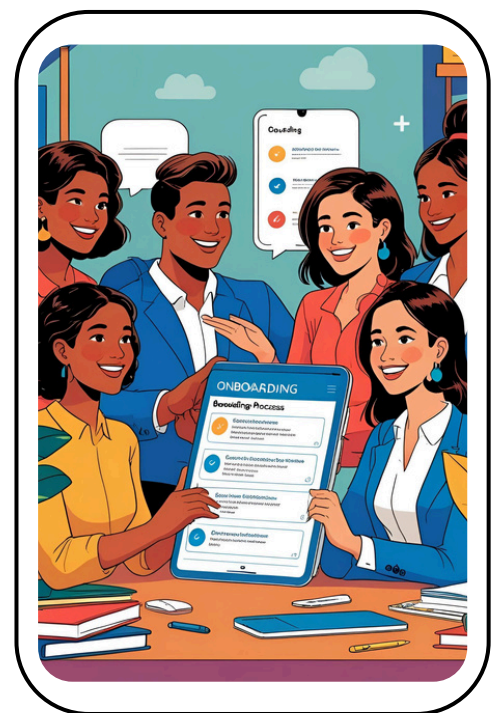

Step-by-Step

1. Use ChatGPT to create a welcome message series
2. Add responses to WhatsApp auto-replies
3. Create a Notion page or form explaining next steps

Monetization

- Help small brands set up onboarding flows
- Create digital onboarding templates to sell

A good first impression leads to a long relationship. This skill helps you build customer loyalty like a pro.

7. AI Business Execution Playbook

You've learned the skills. Now how do you apply them in real life, consistently? This chapter gives you a 7-day plan to launch or grow a business using AI.

What It Means

- A playbook is a daily routine to help you execute, not just learn.

Why It Matters

- Action beats perfection. Consistent steps lead to progress.

Tools to Explore

- **ChatGPT** to brainstorm tasks
- **Google Calendar** or **Trello** to schedule work
- **Canva**, **Paystack**, **Notion** for implementation

1-Week Action Plan

Day 1: Choose your niche (e.g., perfume sales, online courses)

Day 2: Use ChatGPT to create a brand name and business description

Day 3: Generate 10 content ideas and design 3 with Canva

Day 4: Set up Paystack payment link and test it

Day 5: Create a sales deck or flyer with AI help

Day 6: Reach out to 10 leads with an offer

Day 7: Deliver service, collect payment, and ask for feedback

Monetization

- Launch your AI-powered service or product by the end of the week

Conclusion

The future belongs to those who execute. This plan ensures you go from learning to earning in 7 days.

Final Chapter: What To Do Next - From Learning to Earning

You now have the blueprint. But knowledge alone won't change your life. Action will. The skills in this eBook are powerful, practical, and proven. Start small. Practice one skill each week. Share your results. Look for real problems to solve.

Next Steps:

- Pick 1 skill and practice it daily for 7 days
- Offer your service to 5 people this week
- Join an online community of young creators

Remember:

The AI revolution is not coming. It's already here. And YOU are not too late. You just have to start now.
